NOTABLE PROJECT EXPERIENCE

Big Red Chip Project - Cornell University

September 2007 – May 2008

Designed and fabricated a 130 nm, low-power general-purpose processor with custom GPS tracking instructions as part of a student-led team. Main contributions were dual-phase pipeline design, dual-frequency clocking logic for scan chain, instruction decoder design, low-power optimizations.

BUSIPlus – Online Schedule of Classes Project – SUNY Binghamton March 2005 – September 2011 With a partner, created PHP scripts to parse and store online university class information into a local MySQL database. Used the database to support a new web-based application that provided 5,000 students with a visual, grid-style class schedule builder.
